

QUESTIONS TO HAND IN-EXPERIMENT 03

NAME _____

LAB INSTRUCTOR _____ LAB DAY/TIME _____

1. If a body is not moving at all, what would a plot of acceleration vs. time look like?
2. If a body is moving at a *constant velocity*, what would a plot of acceleration vs. time look like?
3. If a person's speed away from the detector smoothly changes from a value of 0 m/s to 5 m/s in an elapsed time of 3 s, what is the average acceleration?
4. If a person's speed toward the detector smoothly changes from a value of 0 m/s to 5 m/s in an elapsed time of 3 s, what is the average acceleration?
5. A person performs the following motions over a total span of 15 s: She starts from rest as she moves away from the detector for 5 s, where she reaches a speed of 2 m/s. She then slows down to 0 m/s in the next 5 s, and then heads back toward the detector increasing her speed to 1 m/s at the end of the next 5 s. What is the average acceleration over the:
 - (a) first 5 s interval? _____
 - (b) second 5 s interval? _____
 - (c) the third 5 s interval? _____
 - (d) the total 15 s interval? _____
